

Electronic Stability Program (ESP®)

Active crash prevention technology

Electronic Stability Program (ESP®) is an active safety system that helps prevent crashes by reducing the danger of skidding.

Also known as Electronic Stability Control (ESC), ESP® additionally incorporates the functions of Anti-lock Braking Systems (ABS) and Traction Control to stabilise the vehicle when it deviates from the driver's steered direction.

Which vehicles have ESP® in Australia

Make	2006 Models	ESP®
