

TOWARDS ZERO

getting there together in the Great Southern

TOWARDS ZERO

getting there together in the Great Southern

Our long term vision is of a road system where death and serious injury are virtually eliminated.

THE FOUR CORNER STONES

A Safe System benefits all road users and has four essential elements:

- Safe road and infrastructure
- Safe road environments
- Safe speeds
- Safe vehicles

GUIDING PRINCIPLES OF THE SAFE SYSTEM

1. The state of human performance in the real world is variable and will lead to occasional errors and violations.
2. The physical limits of human performance are constant forces. The aim is to ensure that violations do not result in a crash.
3. Shared responsibility. The concept of safety as an individual and shared responsibility.
4. A forgiving road environment that allows margins for human error, so that violations do not result in a crash.
