HOW PREPARED ARE YOU?

Have you told anyone where you are going and how long you will be?

Is your vehicle in good mechanical condition?

How well do you know your vehicle?

Have you driven a 4 wheel drive vehicle before?

Do you have plenty of water and food?

Do you have at least two spare tyres?

Are you competent at driving on unsealed roads?

Do you know what speed you should be doing on unsealed roads?

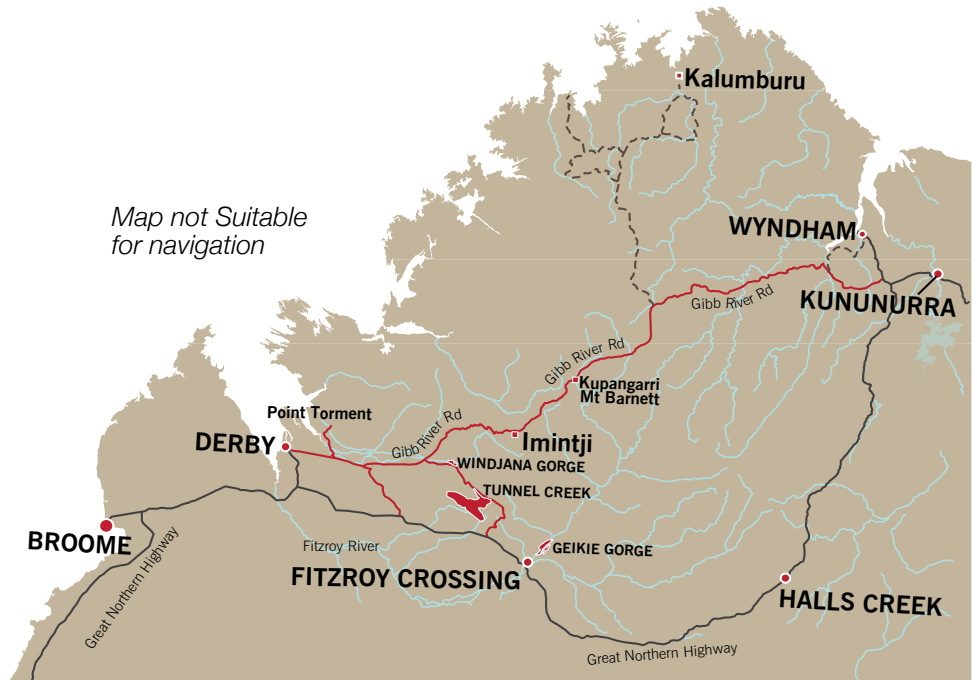

Do you know what to do if your vehicle starts to slide sideways on the gravel?

Do you know what to do when crossing a waterway?

Do you know what to do if you get bogged?

Do you know what to do in case of emergency?

If you cannot answer 'yes' to all of these questions you should read on for your own safety.....

DON'T RUIN YOUR TRIP

Every year in the Kimberley travellers have their holidays ruined either by a road crash or misadventure due to not being prepared.

Since January 1st 2005, there has been one crash fatality and 21 crashes where people needed medical or hospital treatment on the Gibb River Road.

57% of crashes (since 1993) have been a single vehicle roll over type crashes.

80% of crashes happen during daylight and 64% on straight stretches of road.

Don't you be the next!

It's worth taking the time to plan your trip before you go and to take care when driving on unsealed sections of road. You will then have a great trip and an unforgettable experience travelling through some of the most beautiful and wondrous scenery in the Kimberley.

Road Safety: It is your responsibility

Road Safety is your responsibility. This guide provides you with the basic information you will need to reduce your road risks whilst travelling the Gibb River Road and other unsealed roads in the Kimberley. You should refer to specialist 4WD publications for further information

Check the Road Condition

Always check the road conditions before departing. For up to date information on roads phone our Customer Information Centre on:

 **138 138** (24/7).

You may also need to check with the local Shire for local road conditions (phone numbers found on back page).

Let Someone Know

Always inform someone of your planned journey and estimated time of arrival. Remember that driving times vary depending upon the condition of the road, driving habits, experience and type of vehicle. Always make sure you let that person know when you have arrived safely. Do this for each leg of your trip.

Your Vehicle

Know the limitations of your vehicle. Four wheel drive vehicles have a higher centre of gravity. Do not take 2WD vehicles on 4WD tracks. Have your car fully serviced before you leave. Take at least two spare tyres with you, as well as a current detailed and accurate map.

Fuel

Unleaded/lead replacement and LPG is not always available in some remote areas. Check with the fuel distributors or the tourist information office before you leave. You may need to take jerry cans with extra fuel. Make sure these are stored securely and the lid is tight to avoid leakage on rough roads.

Water/Food

Take approximately nine litres of water per adult per day. You should take enough extra water and food to last 2-3 days past your intended travel time. - Be aware, there can be large distances between food outlets.

Emergency Equipment

You should consider taking the following items with you, in case of emergency:

- First aid kit
- Fire extinguisher
- Recovery gear - including a snatch strap or a load rated rope
- EPIRB (Electronic Position Indicator Radio Beacon)
- Satellite Phone H.F. Radio

REMOTE TRIP PLANNING

Weather/Best time to Travel:

The Kimberley has two distinct seasons the wet (Dec-April) and the dry season (May-Nov). Most unsealed roads are impassable during the wet season. Plan to take your trip between May and Nov.

Always phone the Main Roads WA Road Condition Report Number (138 138) before departing on each leg of your trip, even if you are travelling in the dry season.

Remember, you can be fined under the Main Roads Act and local Shire by-laws for driving on roads that are signed closed. Your vehicle may not be covered by insurance if you put in a claim for damage that occurred on a closed section of road, more importantly your life and those with you would be at risk.

WHAT TO DO IN AN EMERGENCY

In the event of an emergency in a remote area, such as a break down or if you get bogged, always **STAY WITH YOUR VEHICLE**. Searchers, especially aerial searchers, are more likely to see your vehicle than you. Your vehicle will also provide you with shelter from the sun and other elements.

Your vehicle is also where your stores of food and water are (you will only be able to carry enough for a couple of days if you set off on foot). Many travellers have been known to die in remote areas simply because they have left their vehicle.

Keep Left

All traffic on two lane roads in Australia must travel to the left of the carriageway.

Alcohol

If you are going to drink – don't drive!

A driver cannot, by law, be in control of a vehicle with a Blood Alcohol Concentration (BAC) of 0.05% or above. Even small amounts of alcohol can affect your ability to control a vehicle.

Police patrol roads regularly and can test a driver at random for alcohol consumption.

Seatbelts

All drivers and passengers travelling on Western Australian roads are required to wear seatbelts.

Ensure all occupants of the vehicle are wearing a seatbelt even when driving on remote bush tracks, for their own safety.

Infants under 12 months of age must be restrained in an approved child restraint

FLOODWAYS, CREEKS & RIVER CROSSINGS

At floodways, creek crossings or when water is across the road surface, you should always stop the car to check the water depth and how fast the water is flowing before attempting to cross. Always wade across to check the water depth, however, do not enter the water if there is the possibility of crocodiles in the vicinity. We recommend walking both tyre tracks to check for submerged logs and debris.

As a general rule, if you cannot stand in the water then it is flowing too fast to cross. It is not necessarily the depth of the water, but rather the speed that will cause problems when crossing floodways and creek crossings. You should also determine if the water is rising or falling. Floodways in the Kimberley often rise and fall quickly and if you wait patiently the water will eventually drop enough to cross safely.

To cross safely we recommend the water depth should be no more than 50cm (for an average adult - about knee high) for most 4WD vehicles and less than 20cm for 2WD vehicles.

If in doubt, DO NOT attempt to cross.

AVOID FATIGUE

Many serious and fatal crashes are caused by driver's falling asleep at the wheel. With the long distances travelled in the Kimberley, fatigue is a very real road safety risk.

Tips to avoid fatigue:

- Plan your trip to include regular rest stops (at least every 2 hours).
- Take water to drink along the way. Dehydration is a common cause of fatigue.
- Avoid driving at night and especially when you would normally be sleeping. Your chances of crashing are much higher at night.
- Get a good nights sleep the night before driving.
- Swap drivers regularly if possible.
- Do not consume alcohol before driving and at rest breaks and avoid drinking too much alcohol the night before.
- If you are feeling tired pull off the road and have a sleep – it's the only cure.

UNSEALED ROADS

Unsealed Roads

Unsealed surfaces are unpredictable and caution must be taken at all times!

It is recommended that you change over to 4WD in high range (4H) when travelling on unsealed sections of road for better traction. (Remember to lock your hubs if need be).

Remember to disengage 4WD when you return to sealed road.

Speed

You should always drive to the conditions of the road. If the road is corrugated, has multiple potholes, is winding with many corners or soft loose gravel - reduce your speed. Remember that you will not be able to drive at the same speed as on a sealed road. It will take you longer to get to your destination.

Corrugations

Driving on corrugations can be quite hazardous. Always be cautious and slow down when rounding curves as speed may cause loss of traction and control of your vehicle or trailer. Try to avoid overtaking on corrugations - be patient, an opportunity will arise.

Dust

Driving on unsealed roads will always produce dust.

Always drive with your headlights on low beam, this will make you more visible to oncoming traffic and traffic ahead of you.

Never overtake someone if you cannot see what is coming the other way through the dust. Be patient, reduce your speed and stay alert- you may catch up to the vehicle in front but not see them through the dust.

Do not stop unnecessarily as there maybe another vehicle behind you. If you need to stop pull off the road.

Do not move to the centre of the road, stay on the left hand side at all times.

Dust can linger in the air if there is no wind. If dust lingers, keep your speed to a minimum until you have clear vision and remember:

Slow down and enjoy the ride.

Turn Your Headlights On

Always drive with your headlights on low beam during the daytime so that you may be easily seen by oncoming traffic or when you approach another vehicle from behind.

Overtaking

Use your headlights (low beam) when approaching a vehicle from behind. DO NOT overtake if the visibility is poor.

Make sure you have plenty of clear straight road in front of you and remember some road trains can have up to 4 trailers, so give yourself enough distance to pass safely.

If you have a CB radio try contacting the truck driver to let them know you are behind. After overtaking, try to get a reasonable distance ahead before moving back to your side of the road. This will avoid windscreen damage.

Skidding

Probably the greatest hazard when driving on unsealed roads is loss of control due to skidding. A skid can develop quickly and is usually due to the driver changing speed or direction.

A rear wheel skid is the most common and can occur when travelling too fast through a curve, or when braking on a curve or a slippery surface.

To correct a rear wheel skid:

- Do not apply the brakes
- Ease off the accelerator, gently but not completely
- Steer gently towards the side the rear wheels are skidding
- Straighten the steering as soon as the vehicle straightens out
- Gently re- apply accelerator.

A front wheel skid usually occurs on a curve or bend when the vehicle is moving too fast to maintain traction with the road surface, particularly on gravel. The vehicle will continue to travel in a straight line instead of turning.

To correct a front wheel skid:

- Ease your foot off the accelerator
- Straighten the front wheels
- Brake gently to reduce speed
- When control is regained, turn the front wheels in the desired direction.

A four wheel skid is usually caused by heavy braking. All wheels will lock up and stop rotating.

To correct a four wheel skid:

- Ease off the brake pedal for a moment
- Gently re-apply the brakes
- If the wheels lock up again, repeat the process.

REMOTE TRAVELLING

What to do if you get bogged

Should you get bogged try the following:

- Engage 4WD if you haven't already. (Remember to lock your hubs if need be)
- Try reversing out.
- Let some air out of your tyres and try to drive out.
- Place sticks, bushes and spinifex under the front tyres then try and drive out.
- Wait with your vehicle for another vehicle to come along and pull you out using a snatch strap or load rated rope. **Do not use the tow ball as an anchor point for the rope or snatch strap.**
- If you are still bogged, stay with your vehicle until help arrives.

Tyres

Unsealed roads in the Kimberley have very sharp rocks, which can easily puncture tyres.

Ensure that you take at least two spare tyres, extra tubes, tyre repair kit and an air compressor. Instructions on how to change your tyre will be in the vehicle manual.

Choose a suitable place to change your tyre so you can be easily seen by oncoming traffic. A flat, straight section of road is the best place.

Pull off the road and use your hazard lights.

REGULATORY SIGNS

Road Signs

These signs are red and/or black on a white background. You must, by law, abide by what the sign tells you to do.

Warning/Advisory signs

These signs are black on a yellow background. They indicate hazards ahead. You should adjust your driving speed accordingly and be prepared for what is ahead. Hazards are not always signposted and road conditions can change quickly, be alert for hazards at all times.

When these signs indicate a suggested speed, the speed is set for DRY conditions - lower your speed even more if the road is wet.

REMOTE TRIP PLANNING

Overnight camping is only permitted where you see a “24 Hour Stopping” sign. At these rest areas you may pull over and spend the night before continuing your journey the next day. If you require extended camping refer to the tourist information bays for sites along your route.

When using Main Roads rest area ensure all fireplaces and barbecues are put out before you leave and remember to place any extinguished cigarette butts in the bin or take them with you.

FIRES AND SMOKE

Bushfire season runs from June through to late October. During this time Station owners' burn off the bush to encourage new growth during the wet season to feed their stocks. The flames and smoke from these fires can be very hazardous to motorists.

If driving through or near a bushfire or smoke remember that wildlife may be panicked and fleeing the area. Animals may use the roadway to flee the area this presents an increased risk to hitting wildlife and stock.

If you encounter fire:

- Slow down and look for people, vehicles and livestock
- Turn car headlights on, close windows and outside vents.

If you cannot see clearly:

- Pull over to the side of the road
- Stop your engine, put on hazard and headlights.
- Wait until smoke clears before continuing your journey.

STRAYING ANIMALS

Straying stock and wildlife are often found on roads in the Kimberley. Keep alert for animals on or near the road, especially at dusk and dawn. Avoid travelling at night if possible. If an animal appears on the road in front of you brake firmly in a straight line and sound your horn. Do not swerve, aim to pass behind the animal.

TOWING CARAVANS/CAMPER TRAILERS

It is not recommended that you tow a caravan on unsealed roads in the Kimberley.

If you wish to take a camper trailer it is advised that it have 4WD tyres with a high clearance and be built to withstand corrugations and a rough road surface.

ABORIGINAL LAND/PRIVATE PROPERTY

The land either side of an unsealed road is private property, even when it is not fenced. If you wish to travel on any roads other than the Gibb River Road, Kalumburu Road, Mitchell Plateau Road, Mornington Road, Tanami Track, Cape Leveque Road, Bungle Bungle Road or the sign posted gorge and beach access roads, you will need to seek permission from the owners. Contact tourist centres for further information.
